

CROSS SECTION OF THE ARCHITECTURAL INSULATED PANEL

OVERLAP

Our Architectural Insulated Panel plates have a simple mounting system that streamlines the construction process and significantly **reduces construction costs**. Specifically, it has a system very similar to tongue and groove that favors the perfect fit between some plates and others.

In addition, it also guarantees the tightness of the structure by perfectly covering and sealing the joint area, which is very vulnerable to humidity and condensation. Thanks to this tongue and groove, **the screw heads are hidden and a homogeneous**, thus, a uniform final aesthetic can be achieved.
